

New AMSA Publication is a Must Have for Utilities

Creating Successful Total Maximum Daily Loads

The total maximum daily load (TMDL) program has been part of the Clean Water Act since 1972, but has become a significant focus of attention during the last ten years. The *Handbook* provides timely and current information on regulatory, legal, and policy developments in the TMDL arena, with a special focus on identifying and managing POTW concerns and issues. It also offers strategies for utilities to consider to enhance their effectiveness in TMDL development and planning. The *Handbook* also contains a comprehensive Appendix of referenced TMDLs, and federal and state guidance documents, which when available, are posted in an unparalleled interactive TMDL reference library on the AMSA website at www.amsa-cleanwater.org.

This one of a kind *Handbook* will be a ready reference and thought-provoking tool for utility managers, lawyers, and key staff for years to come. **\$40 for members, \$55 for non-members.**
